Experience

Frontend Developer

Unipolar Technologies Pvt . Ltd (July 23 - Present)

- Designed and developed user interfaces using ReactJS and NextJS for client frontends.
- Integrated RESTful API solutions, enhancing system functionality and performance.
- Used Tailwind CSS, Material UI for developing User Interfaces.
- Implemented and maintained a MySQL database for effective data storage, retrieval, and management within the applications.
- Collaborated with the backend team to create new functionalities and features that further enhanced the website's capabilities.
- Handled manual deployments on platforms like Plesk, Filezilla, Vercel and Netlify.
- Used Git GitHub for version control.

Software Developer Intern.

Unipolar Technologies Pvt . Ltd (Feb 23 - June 23)

- Collaborated with the development team to design and implement new features and functionalities within the MERN stack.
- Built web applications using React or Vite as per requirements.
- Used React.js and Angular for frontend development.
- User-friendly and responsive designs using Tailwind CSS also used Material UI.

Projects

POS System

- Developed a modern Point of Sale (POS) system frontend using Vite + React, combining the efficiency of Vite's build tool and the flexibility of React for dynamic user interfaces.
- (<https://testapp.urbandiners.com/>)

GetShortLink

- Implemented React.js for the frontend, featuring a user-friendly interface to shorten long URLs and a dashboard to manage shortened links, leveraging Tailwind CSS for modern and responsive styling.
